

WHAT IS CLAIMED IS:

1. A conductive liquid crystal device,
comprising: a pair of oppositely disposed electrodes
and a liquid crystalline organic layer disposed
between the electrodes, wherein the organic layer has
plural regions having mutually different electro-
conductivities.

2. A device according to Claim 1, wherein said
plural regions have different alignment states of
liquid crystal molecules.

3. A device according to Claim 2, wherein said
different alignment states of liquid crystal molecules
have been formed by laser light irradiation of the
liquid crystalline organic layer.

4. A device according to Claim 2, wherein said
different alignment states of liquid crystal molecules
have been formed by voltage application to the liquid
crystalline organic layer.

5. An organic electroluminescence device
comprising: a conductive liquid crystal device which
includes a pair of oppositely disposed electrodes and
a liquid crystalline organic layer disposed between
the electrodes, wherein the liquid crystalline organic

9, 10 15 20 25

layer has plural regions having mutually different alignment states resulting in different luminances of luminescence from the device.

- 5 6. An organic electroluminescence device
comprising: a conductive liquid crystal device which
includes a pair of oppositely disposed electrodes and
at least two organic layers disposed between the
electrodes, wherein said at least two organic layers
10 include at least one liquid crystalline organic layer
having plural regions of different electro-
conductivities resulting in different luminances of
luminescence from the device.
